Summary

Passionate Data Analytics enthusiast skilled in SQL, Python, and Power BI, with a strong interest in turning data into actionable insights. Continuously learning and exploring innovative solutions through data-driven decision-making.

Experience

Prodigy Infotech

Data Analyst Intern

Gained hands-on experience in cleaning and preprocessing datasets for analysis. Learned to modify and transform data to suit various analytical requirements. Created visualizations using different chart types (e.g., bar charts, line graphs, pie charts) to effectively communicate insights.

Oasis Infobyte

Data Analyst Intern

Hands-on experience in data collection and preprocessing. Applied data analysis and visualization techniques to extract insights. Improved skills in business data interpretation and analytical problem-solving.

Hyundai Motor Private Limited

Data Analyst Intern

Data Analyst Intern at Hyundai Motor India Limited with a strong interest in Data Analytics. Enthusiastic about transforming data into actionable insights and driving data-driven decision-making.

Projects Done

Sentiment Analysis | *Python, Machine Learning, Sklearn*

Designed a sentiment classification system to categorize product reviews into positive, negative, and neutral classes. Converted textual data into numerical features using TF-IDF vectorization. Worked with real-world e-commerce review datasets (Amazon/Flipkart) to analyze customer feedback.

Brain Tumor Detection | *Google Colab, VS Code, Python, Flask*

Developed a CNN-based deep learning model using EfficientNetV2 to detect the presence of brain tumors from MRI images. Built a web-based interface using Flask, developed and managed in VS Code, for MRI image upload and prediction display.

Anomaly Detection in robot using the Current Sensor Data

Built an anomaly detection system for robots using current sensor data to identify abnormal behavior and potential faults. The solution helps improve operational reliability through real-time monitoring and predictive maintenance.

Technical Skills

Languages: Python, C, UI/UX, SQL (basics)

Concepts: Operating System, Database Management, Artificial Intelligence, Machine Learning, Deep Learning (beginner)
